Technical Skills

Languages: Java, SQL
Frameworks: Spring Boot, Spring Security, Spring Cloud
Databases: MongoDB, MySQL
Tools: Git, Postman, Maven, JWT, OpenFeign
Concepts: REST APIs, OOP, DSA, Microservices

Summary

Java Backend Developer with a strong foundation in Spring Boot, RESTful APIs, MongoDB, and JWT authentication. Experienced in building scalable microservice architectures using Spring Cloud and deploying secure backend systems. Passionate about backend logic, clean architecture, and collaborating in professional development environments.

Education

BS Software Engineering
International Islamic University Islamabad
2021 – 2025

Projects

ManiLogix – Microservices Supply Chain System
Spring Boot, MongoDB, Spring Cloud, JWT, Eureka, API Gateway
Enterprise backend system for managing inventory, orders, and suppliers using decoupled microservices with role-based access control and centralized authentication.
GitHub: lnkd.in/gDY2dJz2

Voice-Controlled Task Manager
Spring Boot, MySQL, Dialogflow, REST API
Task manager app supporting CRUD via voice/text inputs using Dialogflow and a secure Spring Boot backend.
GitHub: github.com/your-profile/voice-task-manager

2FA Login System
Spring Boot, JWT, Email/SMS OTP, Spring Security
Secure login system with role-based access and 2FA authentication.
GitHub: github.com/your-profile/2fa-login-system

FlavorFit – Meal Ordering App
Spring Boot, MongoDB, JWT
Secure food ordering and recommendation system with role-based features for users and nutritionists.
GitHub: github.com/your-profile/flavorfit

Additional Info

Available for internship or full-time entry-level opportunities.
Open to remote and on-site roles.
Strong communication and collaboration skills.
