PROFILE SUMMARY

Backend Developer with hands-on Spring Boot and microservices experience since May 2025, including independently built projects covering service discovery, API gateways, and fault-tolerant distributed systems. Currently a Backend Developer at Litgrey Technology, where I progressed from building individual APIs to leading bug-resolution efforts and now independently own backend delivery for an Optician Business SaaS platform. Comfortable owning features end-to-end — from API design through delivery to frontend integration.

SKILLS

Languages: Java, Python, JavaScript
Frameworks: Spring Boot, Spring Cloud, FastAPI
Microservices: Eureka, API Gateway, OpenFeign, RestTemplate, Spring Cloud Config, Circuit Breaker, Retry, Rate Limiter (Resilience4j)
Databases: MongoDB, MySQL, PostgreSQL
Security: Spring Security, JWT, OTP-based 2FA
Other: REST API Design, Node.js (NLP integration), Git, Postman, Team Leadership, Domain Knowledge (SaaS billing/finance basics)

PROFESSIONAL EXPERIENCE

Backend Developer — Litgrey Technology

Islamabad, Pakistan (Hybrid) | Optician Business SaaS Platform | Nov 2025 – Present

Nov 2025 – Jan 2026 · Associate Backend Developer

- Built and tested REST APIs for the Optician Business SaaS platform; coordinated directly with frontend developers to verify and integrate endpoints before release.

Feb 2026 – Apr 2026 · Bug Resolution Lead

- Led a 4-person cross-functional team (1 QA engineer, 2 frontend developers, 1 junior backend developer) to triage and resolve Development environment bugs across the platform.

May 2026 – Present · Backend Owner

- Took full ownership of backend API development — designing, building, and delivering complete modules to the frontend team, from an initial 4–5 API fixes per cycle to shipping full modules end-to-end. Gained working knowledge of core finance/billing workflows through the Optician business domain.

PROJECTS

ManiLogix – Microservices Supply Chain System *Aug 2025 – Oct 2025*

Spring Boot, Spring Cloud, Eureka, API Gateway, OpenFeign, JWT, MongoDB | github.com/rehman4113/Mani-Logix-B2B

Enterprise-style backend for inventory, suppliers, and orders across independent services. Implemented JWT-secured auth with role-based access (Admin/Manager/Supplier), real-time inventory tracking, and unified routing via API Gateway with Eureka service discovery. Includes a Postman collection covering all endpoints.

AI-Powered Task Manager *Jun 2025 – Jul 2025*

Spring Boot, Java, MySQL, Node.js (node-nlp), HTML, Tailwind CSS, JavaScript | github.com/rehman4113/AI-Powered-Task-Manager

Full-stack task manager where a Node.js NLP layer interprets natural-language commands (e.g. "add a task to call mom") and forwards structured intents to a Spring Boot backend exposing RESTful task APIs, with a responsive frontend UI.

Two-Factor Authentication System *May 2025*

Spring Security, JWT, OTP (Email/SMS)

First independent backend project. Built a secure 2FA login flow with OTP verification, role-based access, and token management to protect sensitive endpoints.

FlavorFit – Meal Ordering App (University Final Year Project) *2025*

Spring Boot, MongoDB, JWT | Private repository — available on request

Backend for a meal ordering platform with JWT-secured, role-based APIs managing users, orders, and nutritionist recommendations.

EDUCATION

BS Software Engineering (2021 – 2025)
International Islamic University, Islamabad
